

Around 80% of the material used in Schock sinks is quartz, the hardest constituent of granite.

The granite used in Schock sinks is combined with high-grade acrylic to produce a hardened composite material that is resistant to cracks and dirt and also responsible for the long life of the sinks.

Materials produced by Schock have been specifically developed to meet the requirements in modern kitchens and withstand everyday use without a trace. Schock sinks are extremely durable and easy to clean – red wine, coffee and heavy pans leave absolutely no marks.

### CRISTADUR® - Feel the difference

CRISTADUR® material has an ultra-fine structure, resulting in unprecedented ease of care and featuring a dirt repellent effect (the dirt simply runs off). Dirt that could be a breeding ground for bacteria finds it impossible to stick to the material's surface.

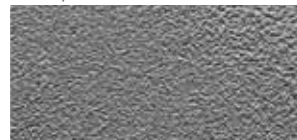

An added benefit of CRISTADUR® is its silky-smooth finish – it's wonderfully soft to the touch while offering maximum resistance to dirt and scratches.

All Schock **materials** boast the following properties:

- Antibacterial (exclusive to Schock)
- Easy to clean
- Food-safe
- UV-stable
- Stain-resistant
- Extremely tough and impact-resistant thanks to the very high quartz content
